CONNECTPLUS · CHURN & RETENTION REVIEW

Stopping the leak

What two years of customer data say about who leaves, why they leave, and what to do next

Sep 2024 – Aug 2026
Period analysed

12,700+
Customers in the data

4,276
Customers lost

Prepared by [Abhishek Liladhar Gajbhiye] · Portfolio project on a synthetic telecom dataset · Excel, SQL Server, Power BI

THE PROBLEM

Churn costs ₹3.9 Cr a year, and today's approach catches it too late

₹3.9 Cr

Revenue lost every year

Monthly churn is 2.32% against a 1.5% target, missed 24 months out of 24. Net revenue retention is 97.6%.

79%

Of churn is by choice

Customers leave voluntarily, not for non-payment, so most of this loss can be prevented.

3.3×

Higher churn with no contract

Month-to-month vs 24-month customers. Churn also spikes in the first 3 months and at renewal.

17.5%

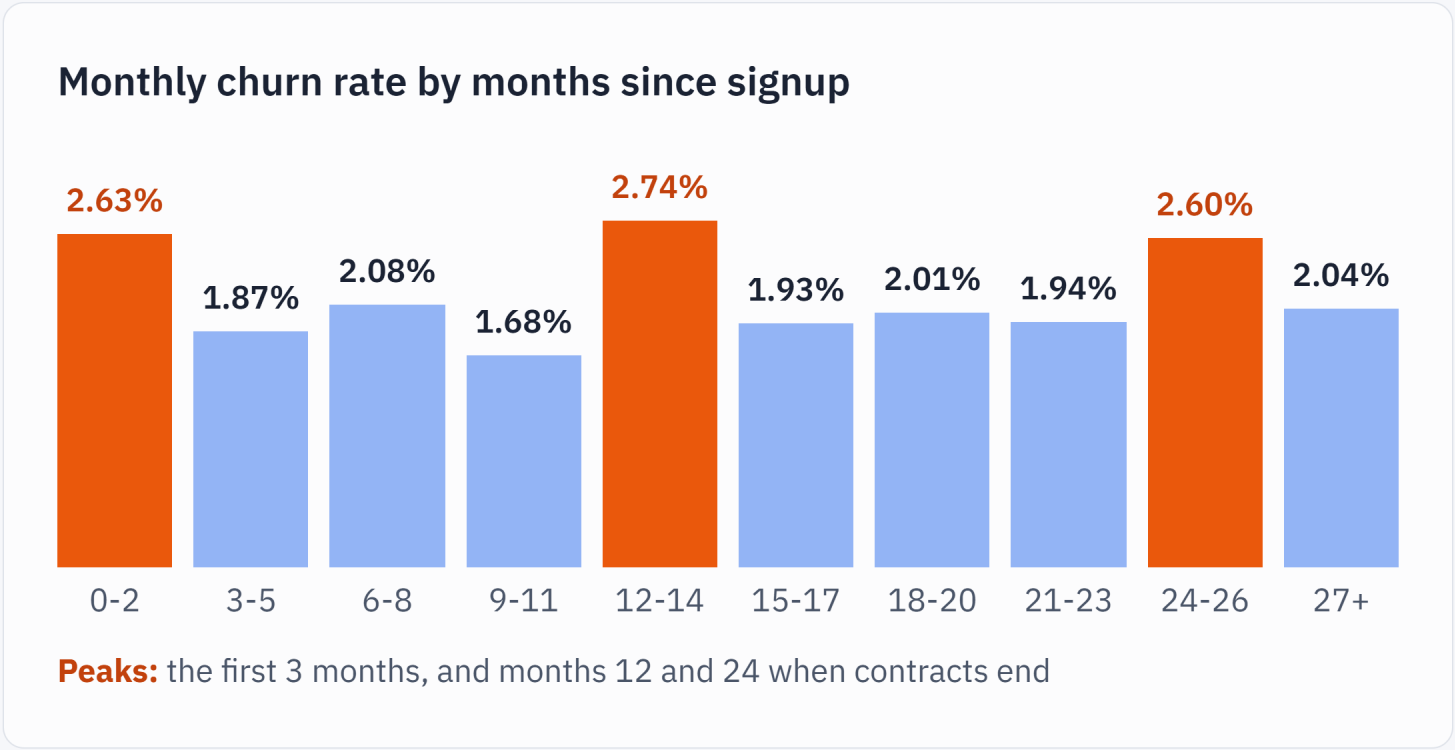

Saved by last-minute offers

Offers made on a cancellation call rarely work, and ₹13.8 L of revenue is at risk right now.

Source: ConnectPlus dashboard, Sep 2024 – Aug 2026 · Revenue lost = monthly bills of churned customers × 12 · 2

WHO LEAVES

Churn is predictable: no-contract, entry-level and new customers, and renewal months

Peaks: the first 3 months, and months 12 and 24 when contracts end

2.68% vs 0.81%

Month-to-month vs 24-month. Basic 2.49% vs Premium 1.54%.

4.18%

Partner Dealer early-life churn, 2.2× Retail Store

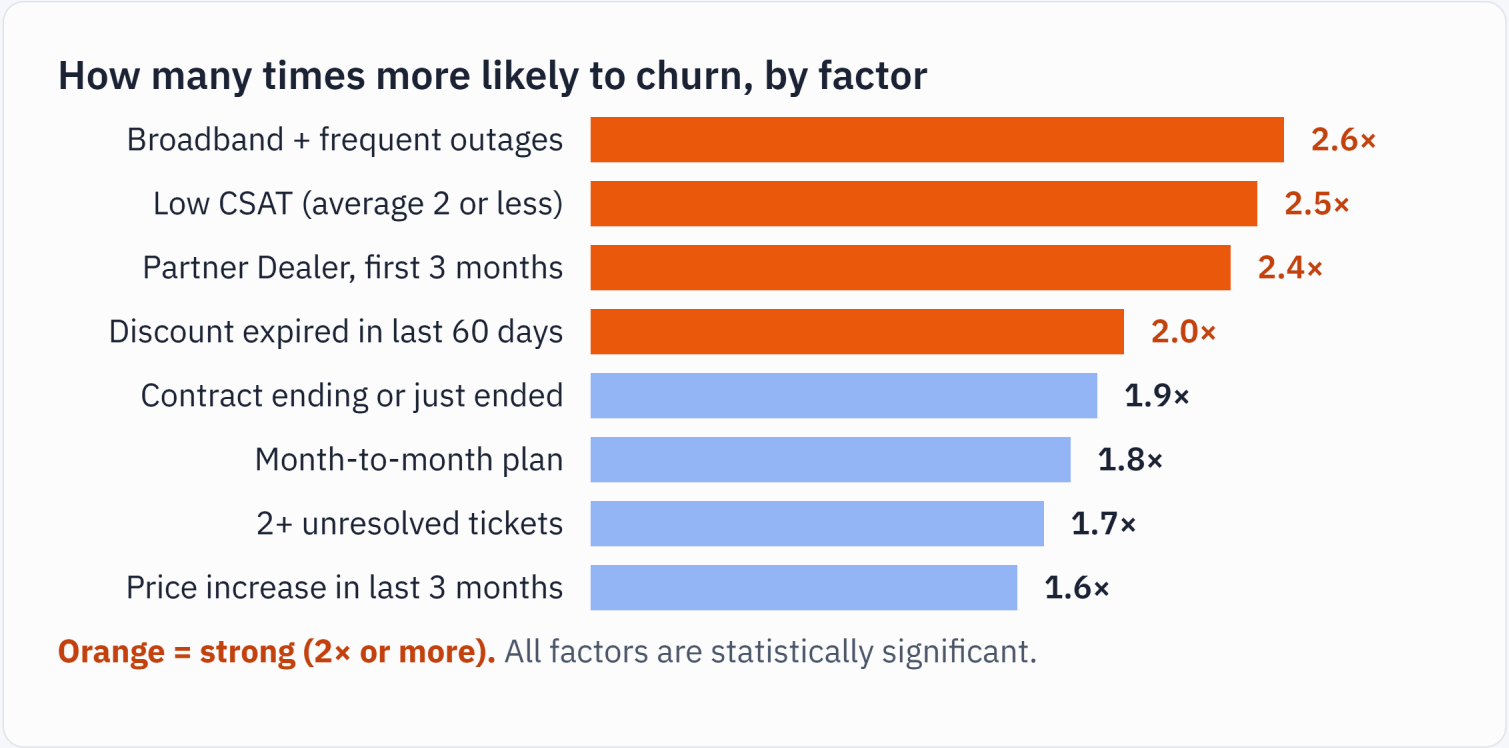

3.08%

Jaipur, highest region; Bhubaneswar 2.59%, Lucknow 2.34%

Source: ConnectPlus dashboard, Segments & Lifecycle page · Average churn across all customers: 2.11% a month · 3

WHY THEY LEAVE

Service failures push customers out: outages and poor support more than double churn

10.3%

Of tickets unresolved; average fix time 27.6 hours

12.1K

Billing & price complaints, the top theme

6×

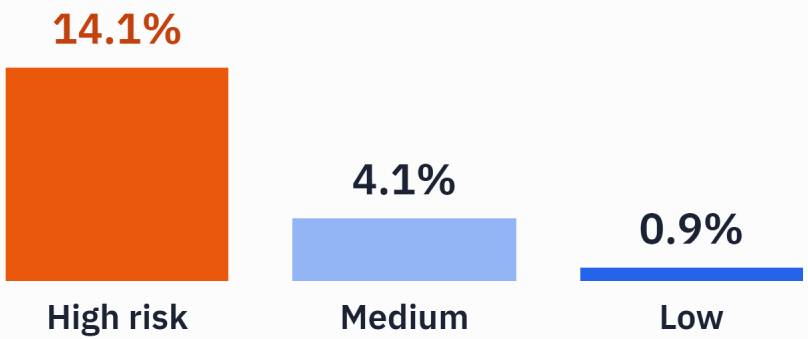

Non-payment churn, cash vs Auto-Debit (1.24% vs 0.20%)

Source: ConnectPlus dashboard, Churn Drivers page · Lift vs customers without the factor, Dec 2024 – Aug 2026, chi-square tested · 4

WE CAN SEE IT COMING

The risk score flags leavers a month ahead: high-risk customers churn 15× more

Churn in the following month, by risk band (backtest)

Average for all customers: 2.2%. Backtest, Dec 2024 – Jul 2026.

27×

More likely to churn after usage drops 25%+

779

To contact now: 32 P1 and 747 P2

140

Expected to leave next month

₹13.8 L

Yearly revenue at risk

Source: ConnectPlus dashboard, Risk & Prioritization page · Priority = risk band × customer value tier, Aug 2026 · 5

WHAT WORKS

Proactive offers save nearly twice as many customers as last-minute ones

Save rate by offer trigger

Proactive outreach

32.7%

34.4% accepted the offer

Cancellation call

17.5%

44.2% accepted, yet most still left

35% of customers who accept an offer still leave within 90 days (46.9% if they decline).

Which offer to lead with

Offer	Save rate	Cost/save
20% off for 3 months	31.4%	₹558
One-month bill waiver	27.8%	₹1,202
30% off for 2 months	25.3%	₹623
Free upgrade, 3 months	22.7%	₹599
50 GB bonus data, 3 months	20.6%	₹437
15% off + 12-month lock-in	19.6%	₹1,647

Best value: 20% off for 3 months. **Worst:** the 12-month lock-in, 3× the cost per save.

THE BUSINESS CASE

A targeted programme could protect ₹10.3 L a year at a 21× return

779
P1 + P2 customers on today's list

→

339
Expected to leave within 12 months

→

20%
Churn cut (scenario)

→

68
Customers kept

Revenue protected, 12 months
₹10.3 L

Programme cost
₹47K

Net benefit, 12 months
₹9.8 L

A first step against ₹3.9 Cr lost a year. Assumes each risk band keeps its past monthly churn rate, saved customers keep their current bill, and each save costs the historical ₹686.

RECOMMENDATIONS

Four actions, starting with a 3-month pilot

01

Call P1 + P2 customers every month

Build the list from the risk score and lead with 20% off for 3 months. 779 customers today, ₹10.3 L protected.

02

Fix the service hotspots

Prioritise outage repairs in Jaipur, Bhubaneswar and Lucknow, and set a resolution deadline for the 10.3% of tickets left unresolved.

03

Renewal and onboarding playbook

Contact customers 60 days before contract end, and review Partner Dealer onboarding (4.18% early-life churn).

04

Move cash payers to Auto-Debit

Cash-Counter customers lose service for non-payment 6× as often. A switching incentive targets involuntary churn directly.

Next step: run actions 1 and 3 as a 3-month pilot and measure churn against a comparison group.

Each action maps to a finding: 1 → slides 5–7 · 2 → slide 4 · 3 → slide 3 · 4 → slide 4 · 8

Quality checks

- 32 of 32 dashboard KPIs reconciled to SQL
- Row-count, orphan-key and reconciliation checks at every layer
- Risk score backtested on Dec 2024 – Jul 2026

Assumptions and caveats

- Synthetic dataset built for this portfolio project
- Revenue lost = monthly bill of churned customers × 12
- What-if: past churn rates hold for 12 months; each save costs ₹686
